

## Issues to report on Excavator

### 1. The Leading Zero on Phone Numbers are dropped

Individual try 20160426 e2.csv - Notepad									
FirstName	MiddleName	LastName	Suffix	FamilyRole	MaritalStatus	Connection	PhoneHome	PhoneMobile	PhoneWork
						Ex-Member,Inactive,Yes	05-5479308	010-5133956	05-5277252
				Male	22/1/1955				EN
				Female	21/12/1915				EN
				Adult,Single	Ex-Member,Inactive,Yes		05-5485801		

Value in CSV file have the leading Zero

```
55479308 Home
105133956 Mobile 📞
55277252 Work
```

Phone numbers without their leading zeros as imported by Excavator

```
055005678 Home
(016) 551-5585 Mobile 📞
leehh@hotmail.com
```

Example to show that it is possible to enter phone numbers with leading zeros into Rock RMS system

# CSV: No Way to Set Phone Country Code #117

Note for those using Excavator in the meantime until this issue is resolved. This SQL will set the country code to +44 (UK) for all the people in your DB.

```
UPDATE [rock].[dbo].[PhoneNumber]
SET CountryCode=44
```

For those who stumble across this who are based in the UK.

Excavator doesn't have the ability to set regex on your numbers and so your leading 0s won't get stripped off which can cause issues with SMS down the road.

If you use the following SQL query this will fix that

```
UPDATE [rock].[dbo].[PhoneNumber]
SET Number = RIGHT(Number, LEN(Number) - 1)
WHERE NumberTypeId='12' AND Number LIKE '0%'
```
